

# Minetest Management Console (1.10.1)

---

Allows you to manage your Minetest server with a text based GUI - Official support sites: [Official Github Repo](#) - [Official Forum](#)

---

You will need to run cpan and install these modules:

- `cpan -i UI::Dialog`
- `cpan -i Term::ReadKey`
- `cpan -i Term::ANSIScreen`
- `cpan -i POSIX`
- `cpan -i Number::Bytes::Human`

Run “mmc”. If you need to change any settings after this, edit “`~/.mmcrc`” and make the desired changes. This can be done within mmc itself.

You also need to have my Minetest Startup Script and Minetest Backup Script installed.

I then suggest you add this directory (MinetestManagementConsole) into your path, so that you can just run “git pull” to upgrade to the latest version of mmc as updates come out.
